

To whom it may concern:

I am opposed to the LightSquared broadband project. I am a farmer that has invested over \$20,000 in global positioning equipment. This equipment allows me to save time and money in my farming operation. It is also good for the environment since pesticides and fertilizer can be precisely applied.

I understand that the LightSquared frequencies will overlap the gps signal spectrum and will render my equipment worthless. I would ask that consideration be given to the impact that rendering gps useless will have for the agriculture industry.

Thank you for your consideration
